

ADOBE SOLUTIONS FOR IMPROVING EDUCATIONAL ORGANISATION AND PRODUCTIVITY

Acrobat software used by South African Revenue Services

Adobe Acrobat software allows institutions to replace inefficient paper-based processes and disparate digital content with secure, paperless Adobe PDF workflows that everyone can access.

Adobe Acrobat 9 Pro software allows institutions to improve collaboration and communication among students, faculty and staff. Adobe PDF documents enable everyone to consolidate learning content for easy access, streamline review and approval processes, reduce paperwork with electronic forms and protect sensitive information.

Acrobat 9 Pro Extended allows faculty, students and staff to unify the widest range of content into a single, compressed and organised PDF Portfolio, which opens up new opportunities for eLearning. Convert virtually any 2D or 3D design - including layers, dimensions and metadata - to a single PDF file that makes sharing product data easy and more secure. Using Adobe 3D Reviewer software, reviewers can compare a revised design to an earlier version, measure and section on precise geometry, and create exploded views, animations and balloons.

Creating rich Adobe PDF Portfolios, Thesis and Dissertations

With Adobe Acrobat 9 Pro software, educators, students, and faculty can combine rich media content - including documents, spreadsheets, web pages, 3D drawings and maps, videos, and more - into a single, compressed PDF Portfolio that's easy for everyone to access and review. For example, an instructor can merge content from multiple sources into a rich course syllabus. Or a student can combine the best coursework and instructor feedback into a professional PDF Portfolio to archive or present as a CV to a prospective employer.

Simplifying review and approval processes

Whether it's developing courses, preparing funding, or fostering interaction and collaboration among faculty, staff, researchers and administrators, Adobe Acrobat 9 Pro helps participants share ideas and communicate more effectively. Participants can add comments to PDF documents and invite others to respond with their own feedback. They can sort the feedback by author, date, or page and use the Tracker feature to monitor progress and participation.

save the trees

Reducing paperwork with Adobe PDF forms

From admission applications and faculty course material to research and funding proposals, institutions are inundated with time-consuming, error-prone paperwork. With Adobe LiveCycle®

Designer software, which is included with Acrobat 9 Pro, anyone can transform Microsoft Word and Excel documents and scanned paper into interactive PDF forms. Departments can distribute forms online for students and faculty to download, fill out, sign and return, saving time and reducing data entry errors.

Protecting sensitive information

Privacy and information security are ever-increasing challenges for institutions, as the volume of sensitive information continues to grow. Whether protecting breakthrough research or student confidentiality, faculty and students can use Adobe Acrobat 9 Pro to ensure high standards of security.
